randyrjm99@gmail.com

DATE

June 2026

For my friend — read this before we talk equity.

SARAWAK MEDCHAIN

Sarawak's Sovereign Health Record System

CONFIDENTIAL · DRAFT

PURPOSE OF THIS DOCUMENT

This is the first of three documents. Read it, click around the live product, then come back to talk. If you decide this is not for you, no hard feelings and we stay best friends. If you are excited, we go to Doc 2 (the Partnership Proposal) and Doc 3 (the Founders' Agreement).

SECTION 1

What Sarawak MedChain is (plain language)

Every doctor in Malaysia issues **medical certificates (MC)** - the paper you show your boss when you take sick leave. Right now, these MCs are:

- **On paper** - easily photocopied and forged
- **Impossible to verify** - your boss cannot tell if it is real
- **Not tracked** - nobody knows how many are issued or by whom

This costs Malaysia an estimated **RM 1.5-3 billion per year** in fraud, sick leave abuse, and insurance claim fraud.

Sarawak MedChain fixes this by putting medical certificates on a blockchain:

- Doctor issues an MC → it is encrypted and gets a unique cryptographic fingerprint on a public blockchain
- Patient controls who can read it - via a phone wallet OR a simple 6-digit code (like an OTP)
- Employer scans the QR code → verifies in 5 seconds if it is real
- Everything logged, auditable, impossible to fake

Full working demo: sarawak-medchain.pages.dev

Try the OTP demo: sarawak-medchain.pages.dev/#!/otp (open in 2 tabs - one is the patient, one is the doctor)

SECTION 2

Why this matters RIGHT NOW

On **21 June 2026**, the **Minister of Health, Datuk Seri Dr Dzulkefly Ahmad**, publicly announced that KKM is studying e-MC implementation to curb misuse of sick leave certificates. (Astro Awani, TikTok @501awani.)

Translation: The Ministry of Health just said Malaysia needs what we have built.

- KKM will pick a vendor for this in 12-36 months
- We can be the vendor - or at minimum, the Sarawak-first showcase
- If we move fast, we get in. If we wait, someone in KL wins.

SECTION 3

What we have TODAY

- Working product live at sarawak-medchain.pages.dev
- Working OTP demo (patient → doctor flow in 5 seconds)
- Enterprise registered (Medchain Enterprise, SSM)
- 12-page business plan ready to send to funders
- 1-page pitch PDF ready to email to hospitals
- Privacy Policy + Terms of Service (PDPA 2010 compliant)
- **Real conversations in progress:** Cradle Fund SVP (contact card in hand), SDEC officer, Ketua Belia Miri (helping with YB introductions)
- 7 months of solo building - no shortcuts, no vaporware

SECTION 4

What we do NOT have yet

- First paying customer
- Signed pilot letter
- Sdn Bhd registration (waiting for first contract)
- Any funding yet
- **A dedicated marketing / customer outreach person** - this is where you would come in

I have been doing everything solo. Building the tech, writing the docs, doing outreach, applying to programs. I am decent at the tech. I need someone better than me at the human side - reaching hospitals, closing pilots, building the brand.

That is you - if you want it.

SECTION 5

What comes next (the next 12 months)

Quarter	Milestone
Q3 2026 Jul - Sep	Land first paid pilot - target: Sarawak General Hospital or 1 klinik swasta
Q4 2026 Oct - Dec	2-3 more pilots active. Sdn Bhd registration. First formal share issuance.
Q1 2027 Jan - Mar	Convert pilots to paid subscriptions. Cradle grant hopefully landed.
Q2 2027 Apr - Jun	5+ paying facilities across Sarawak. First real revenue.

Target by month 12: 5 clinics + 2 hospitals paying = **RM 42,500/month** recurring = **RM 510,000/year**.

This is not a get-rich-quick play. This is a **12-24 month grind** to build a real Sarawak SaaS business.

SECTION 6

Why I want YOU specifically

- You love business - the operating side of things
- I need someone who understands marketing + sales + human relationships
- We are best friends → we trust each other → we will not screw each other over
- You are Sarawakian → we go into hospitals as a Sarawak team → that matters here

But friendship is not a business plan. We need to be honest about time commitment, roles, and what each of us gets out of this. That is the next conversation.

SECTION 7

Before we talk, think about this

1. How much time can you actually give?

- 40+ hrs/week (full-time, no other job)?
- 15-25 hrs/week (part-time, still working/studying)?
- Weekends and evenings only (under 15 hrs)?

Be honest with yourself. Whatever it is is fine, but the equity offer depends on this.

2. What do you get excited about doing?

- Selling to clinic owners (cold walk-ins, phone calls)
- Writing LinkedIn posts + TikTok content
- Both?

3. What are your money needs in the next 6 months?

- Can you go 3-6 months without income from this?
- Are you OK with sweat equity now, cash later?
- No wrong answer - just be honest.

4. What if this fails?

- Startups fail more often than they succeed
- If we shut down in 12 months, are you OK with that?
- Your equity should be worth the risk-tolerance you have

SECTION 8

What I will share next (if you are in)

Once we talk and agree we want to move forward, I will share:

- **Doc 2: Partnership Proposal** - specific role, equity tiers, milestones, expectations
- **Doc 3: Founders' Agreement** - the actual document we both sign (we will get a lawyer to review before signing, RM 200-400 one-off cost)

No verbal deals. Everything in writing. This protects both of us.
